Docket No. 0505-1258P

Art Unit: 2875 Page 2 of 10

CLAIM SET AS AMENDED

1. (Currently Amended) A rear view mirror assembly comprising:

a mirror housing adapted for mounting on a vehicle body;

a mirror mounted to face rearwardly on the vehicle body; and

a turn indicator light and a separate position light mounted in the housing in positions

separate from the mirror and projecting light outwardly from the vehicle body in a forward

direction, said mirror housing including:

a first lens for covering said turn indicator light for enabling illumination

therethrough; and

a second lens for covering said position light for enabling illumination

therethrough,

wherein the first lens is larger than the second lens, so as to encompass a

substantial part of a periphery of the second lens.

2. (Original) The rear view mirror assembly according to claim 1, wherein a light

body of said turn indicator light is a filament light bulb and a light body of said position light

is a light emitting diode, wherein the filament light bulb is mounted at an acute angle with

respect to a mirror surface.

Art Unit: 2875 Page 3 of 10

3. (Original) The rear view mirror assembly according to claim 1, wherein said

position light is kept OFF while said turn indicator light is flashing OFF and ON for

direction indication.

4. (Original) The rear view mirror assembly according to claim 2, wherein said

position light is kept OFF while said turn indicator light is flashing OFF and ON for

direction indication.

5-6. (Cancelled)

7. (Original) The rear view mirror assembly according to claim 2, wherein a plurality

of said light emitting diodes is provided for providing illumination.

8. (Original) The rear view mirror assembly according to claim 1, and further

including a base member for mounting the turn indicator light and the separate position light

within the mirror housing, wherein the base is disposed on a forward side of the mirror

housing and the mirror is disposed on a rearward side of the mirror housing..

9. (Original) The rear view mirror assembly according to claim 8, wherein the base

includes a wall surface disposed between the turn indicator light and the separate position

light, said wall surface forming a reflector surface reflecting light from the turn indicator

light forwardly.

10. (Currently Amended) The rear view mirror assembly according to claim 1,

wherein at least one the first lens is provided for covering said turn indicator light and the

separate position light, and further including a sealing member operatively mounted between

the mirror housing and the at least one first lens for providing a water tight closure.

11. (Currently Amended) A rear view mirror assembly comprising:

a mirror housing having a forward surface and a rearward surface;

a mirror mounted relative to said rearward surface of the mirror housing for viewing

in a rearward direction; and

a turn indicator light and a separate position light mounted relative to said forward

surface of the mirror housing for selectively providing illumination out of the mirror housing

in a forward direction, the mirror and the lights being separate from each other, said mirror

housing including:

a first lens for covering said turn indicator light for enabling illumination

therethrough; and

a second lens for covering said position light for enabling illumination

therethrough,

wherein the first lens is larger than the second lens, so as to encompass a

substantial part of a periphery of the second lens.

12. (Original) The rear view mirror assembly according to claim 11, wherein a light

body of said turn indicator light is a filament light bulb and a light body of said position light

is a light emitting diode.

13. (Original) The rear view mirror assembly according to claim 11, wherein said

position light is kept OFF while said turn indicator light is flashing OFF and ON for

direction indication.

14. (Original) The rear view mirror assembly according to claim 12, wherein said

position light is kept OFF while said turn indicator light is flashing OFF and ON for

direction indication.

15-16. (Cancelled)

17. (Original) The rear view mirror assembly according to claim 12, wherein a

plurality of said light emitting diodes is provided for providing illumination.

18. (Original) The rear view mirror assembly according to claim 11, and further

including a base attached to the mirror housing for mounting the turn indicator light and the

separate position light within the mirror housing.

19. (Original) The rear view mirror assembly according to claim 18, wherein the base

includes a wall surface disposed between the turn indicator light and the separate position

light, said wall surface forming a reflector surface reflecting light from the turn indicator

light forwardly.

20. (Currently Amended) The rear view mirror assembly according to claim 11,

wherein at least one the first lens is provided for covering said turn indicator light and the

separate position light, and further including a sealing member operatively mounted between

the mirror housing and the at least one first lens for providing a water tight closure.
